

FIGURE "EIGHT" SLING

Ref: FI-600
Ref: FI-610

For collarbone fractures and dislocations.

The FI-600 for children of up to a weight of 30 kg, is a cushioned fabric which is free of resins, manufactured using hypoallergenic materials welded by an ultrasonic process; pieces of Velcro have been strategically incorporated so that when the sling is tied in a figure eight it may be securely and quickly fastened; likewise, it can be quickly and easily released and put back on again when the child is washed.

The FI-610 has been designed for patients of between 30 and 110 kg. This is manufactured using the same materials as the FI-600 although it is larger and has reinforced welding given that it has to support a greater force.

The FI-610 is made in a single size, and it is recommended that any material that is not going to be used be cut off at the welded part. None of our products contain foam, as foam generates heat and causes sweating and skin irritation.

HOW TO PLACE

The product should be measured to estimate what quantity to cut.

Calculate the measure that is required by the patient and cut the excess, once cut, fit it the same way that it was measured.

Position the product carefully to avoid creases in the patient's armpit, producing a resulting Figure "EIGHT" then fastening by means of the velcros, of which one can adhere on any part of the velour material.
