

# Thermic BIRETTA

CE

Ref: PR-000  
Ref: PR-000D

## PREVENTION OF THE HYPOTERMIA IN THE NEW BORN

THE FOLLOWING MANOEUVRE CONSISTS ON THE DRYING OF THE BABY IN ORDER TO AVOID THE LOST OF HEAT BY EVAPORATION.

In the precise moment right after the birth, the baby must be dried with warm clothes or towels and covered with a thermal BIRETTA that should cover all the head but the ears, to avoid the loss of body heat by the upper part of the head, at the same time he is placed over the mother's lap or in her arms. The baby is examined and we must be sure that his respiratory tracts are clear. It is important to keep the baby's body heat; babies born in rooms with cold temperature can experiment noticeable decreases in body temperature and this can derive to metabolic problems.

## CUSTOMIZE THIS PRODUCT WITH THE LOGO YOU WANT

2mil provides the chance to personalize our PR-000D model either with the logo of you region, or the one that fits your needs.
